

MASKING FLUID TRICKS

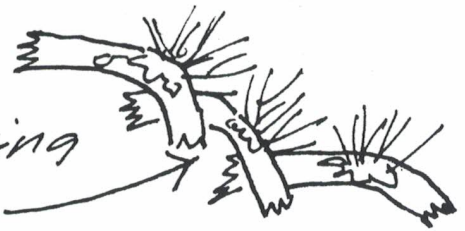

1. Use a stick or brush handle

Use a stick to draw trees upward from masking dropped on tape. (Pull off the tape before letting it dry)

2. Use a straw

Use a straw to blow masking upwards from off tape. You can paint an under-color first and let it dry before applying masking.

3. Use a chip brush

Use tape or tear a template to reflect your landscape. Brush masking fluid off this template with the chip brush. Wash/comb the chip brush immediately after use.
